

⚡ SHURIKEN BLINKY: THE DIY LED CHASER ⚡

PCB Art Meets 3D Printing in this ultimate weekend project!

THE HARDWARE: A STAR IS BORN

The Brain: Powered by the legendary 555 timer and the CD4027 to help all 10 LEDs GLOW!

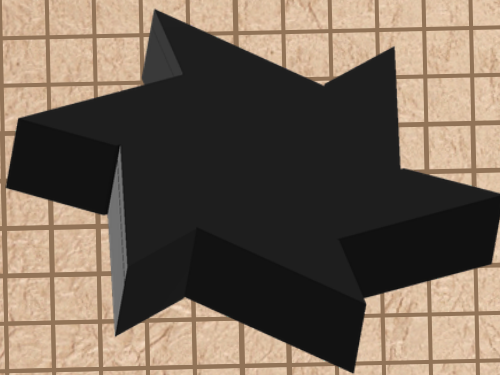

The Blink: 10 Brilliant Red LED lights each placed at one sharp edge, for an aesthetic appeal to the audience!

The control: Dial in your blink rate! The onboard potentiometer helps change the speed of the blink rate.

The power: Simple 2-pin header for easy 9 Volt battery pack.

THE ARMOR: CUSTOM 3D PRINTED CASE

Precision Fit: Custom-modelled 3D enclosure for the Shuriken Blinky Board

Desk Read: Hides the solder joints to allow for a more cleaner and aesthetically appealing finish.

Contrasting color: Print the case in black, and have an amazing contrasting led glow up in the blinky board.

THE BUILD PROCESS

PRINT/FAB

Send the Gerber files to print in a PCB manufacturing Lab. Slice and print the custom Shuriken PCB case.

SOLDER IT

Solder the electronics to their respective holds on the PCB

ASSEMBLE IT

Drop the board in the case, add a battery, watch it CHASE!

SCAN IT!
